CONFERENCE TIMES & TIME ZONES

Thanks for joining ICOET from your time zone. Because the conference includes an in-person component, all times in the program are expressed relative to local time in Denver, Colorado (Mountain Daylight Time, MDT). If you are participating virtually, you can find your time relative to MDT based on your location, using this website: <https://greenwichmeantime.com/time-gadgets/time-zone-converter/>. We have also put major time zones at the beginning of the program.

For example, Denver is -6:00 hours relative to GMT, so 9 am MDT in the program = 8 AM in California and 5 pm in Johannesburg, South Africa.

MESSAGE FROM THE CHAIR

Chris Slesar, ICOET Conference Chair
Vermont Agency of Transportation

On behalf of the ICOET Steering Committee, it is my pleasure to welcome you to the fourteenth biennial International Conference on Ecology and Transportation in beautiful Denver, Colorado. ICOET is more than a conference, it is a community of transportation and environmental planners, practitioners, and academics working at the nexus of linear infrastructure and ecology. Again, this is a hybrid conference expanding our reach far beyond the walls of the conference rooms via virtual participation. New to ICOET in 2025 are a series of training sessions on relevant topics ranging from community involvement to managing and monitoring bats in transportation projects.

We have a robust and exciting program consisting of 4 trainings, 270 presentations (Podium, Lightning, and Multi-media/Poster), from 18 countries and 35 US states. We are honored to have award-winning independent conservation journalist, author of *Crossings: How Road Ecology is Shaping the Future of Our Planet*, Ben Goldfarb as our keynote speaker.

The conference theme for 2025 is Bridging Divides Through Collaboration. Collaboration is critical to success on all scales. Collaborative partnerships overlap and interact in dynamic ways to create and maintain a healthy planet. There are collaborations that are exclusive to the work we are doing in our own jurisdictions. And there are collaborations that capture broad landscapes and multiple political jurisdictions across the globe.

The magic of ICOET is rooted in multifaceted collaborations. ICOET is fueled by the interaction of many individuals representing many diverse organizations, working at different scales, from global to local - together producing a combined effect greater than the sum of their separate parts. This interdisciplinary conference flourishes on the relationships among participants, and their relationships in the contexts in which they are working.

Colorado's magnificent landscape of arid desert, river canyons, and rugged snow-covered Rocky Mountains provides the backdrop for this meeting. It is within this setting that we will undertake a four-day dialog that will inform and inspire participants to return to their respective jurisdictions and continue to bring our work to the next level. Conference participants will be steeped in the most current research and practices as represented by the foremost minds (both newcomers' and veterans') in transportation ecology research, academics, policy, and practice.

ICOET 2025 will be highly engaging and interactive and will delve into a diversity of relevant topic areas that root transportation decision-making in science and sound policy. We enthusiastically and warmly welcome newcomers to ICOET and look forward to embracing them in the camaraderie of the ICOET community. Please take every opportunity to network with old and new colleagues, collaborators, and friends. We look forward to your active engagement in ICOET 2025.

Welcome to Denver and enjoy the conference!

MESSAGE FROM THE ORGANIZER

Fraser Shilling, PhD

Road Ecology Center Director and ICOET Lead Organizer

Every two years, ICOET brings you, a large, diverse and international crowd together to examine how transportation systems impact nature and what we can do to reduce those impacts. Your knowledge and enthusiasm are what makes ICOET successful and allowed it to persist for over two decades now. This year's conference celebrates and focuses on partnership as an important part of mitigating the impacts of transportation. Thanks to our sponsors, to the universities supporting the next generation of transportation ecologists, to the local, state and federal agencies encouraging their staff's participation, and to the private organizations and individuals providing their expertise.

One of the founding and still most common type of presentation at ICOET is "wildlife crossings", which bridge the roads that divide nature. In many ways, wildlife crossings are analogous to partnerships that bridge political divides and probably take as much time to get built. With today's political division, coming together around re-connecting nature provides a needed respite from damaging conflict. The question for nature, as it is in politics, is whether or not we will build enough bridges to save what we value in time to preserve it.

Partnership is at the core of this year's conference theme and many of the abstracts you submitted for presentation. It's also assumed to underlie successful conservation and environmental protection. However, it's often adversity and conflict that drives advancement and innovation, not collaboration. The world's environmental protection laws, civil rights legislation, the gradual recognition of indigenous peoples' sovereignty, women's right to vote, the end of slavery, and even the creation of many national forests and parks arose from different types of adversity. In a time of conflict it is worth considering what we can learn and gain from the adversity. Should we engage in evaluation of where we are in transportation ecology, find out if we are being successful; what should we really be doing, and who should we be doing it with?

This year's ICOET will be the largest in terms of abstract submissions (270), number of panels and organized sessions (19), and number of professionals and students participating. As in previous years, ICOET will be held in hybrid format (in-person and virtual), allowing greater participation by international and state partners and also limiting greenhouse gas production from travel. ICOET benefits from: a) a very active Steering Committee, which advises on overall strategies in conference content and evolution, selects awardees, and connects the conference to other organizations; b) a Program Committee that functions as a deep bench of scientific and practice experts, and c) an Abstract Review Committee, which includes many of you, providing your expert reviews of all contributed presentations. To these Committees -- I appreciate all of your efforts, individually and collectively.

The Road Ecology Center (<https://roadecology.ucdavis.edu>) is joined in organizing ICOET 2025 by the UC Davis Institute of Transportation Studies (<https://its.ucdavis.edu/>) and the National Center for Sustainable Transportation (<https://ncst.ucdavis.edu/>). The three organizations are each pioneers and among the largest in their fields and, in combination cover most issues in evolving sustainable transportation. We are excited to bring you ICOET 2025 and to make sure that ICOET is continuously and expertly managed into the future. We look forward to meeting many of you in-person and virtually and to helping you have a great ICOET experience. Look us up online, or during the conference.

KEYNOTE SPEAKERS

Dan Gibbs

Colorado Department of Natural Resources Executive Director

As Executive Director, of the Colorado Department of Natural Resources, Dan Gibbs leads the departments development and execution of the initiatives for the balanced management of the state's natural resources. Dan works on an array of issues pertaining to all of Colorado's natural resources, including water, wildlife, state lands, oil and gas and mining. Prior to joining the Department of Natural Resources, Dan served as a Summit County Commissioner from 2010-2018. Prior to his tenure as a Commissioner, Dan served in the Colorado House of Representatives and in the Colorado State Senate where he served on the Senate Agriculture and Natural Resources Committee. Dan is a graduate of Western State Colorado University and completed the Harvard Kennedy School Senior Executives in State and Local Government Program. He is also a Marshall Memorial Fellow. Dan and his family reside in Breckenridge, Colorado, where he enjoys all that living in the high country has to offer, including skiing, running, mountain biking, hunting and fishing.

Herman Stockinger

Colorado Department of Transportation Director of the Office of Policy and Government Relations

Herman Stockinger joined CDOT in 2000 and has been the Director of the Office of Policy and Government Relations and a member of the department's Executive Management Team for eighteen years, including the last four as the Deputy Executive Director. Prior to his current position, he served for five years as CDOT's Legislative Liaison, representing CDOT's interests at the State Capitol. In addition to his duties as Deputy Director and Policy Director, Herman also serves as Secretary to the Transportation Commission.

Ben Goldfarb

Journalist

<https://www.bengoldfarb.com/>

Ben Goldfarb is an environmental journalist whose work has appeared in National Geographic, the Atlantic, the New Yorker, Smithsonian Magazine, Science, and many other publications. His most recent book, Crossings: How Road Ecology Is Shaping the Future of Our Planet, was named one of the best books of 2023 by the New York Times, and received the Rachel Carson Award for Excellence in Environmental Writing and the Banff Book Competition's Grand Prize. His previous book, Eager: The Surprising, Secret Life of Beavers and Why They Matter, won the PEN/E.O. Wilson Literary Science Writing Award. He lives in Colorado with his wife, Elise, and his dog, Kit — which is, of course, what you call a baby beaver.

SPONSORS & ORGANIZERS

THANK YOU to our generous private Sponsors for continuing to help us reduce registration fees, to our outstanding co-host agencies, and to the members of the Steering, Program, Abstract Review, and Awards Committees. ICOET 2025 is made possible through the financial and volunteer support of the many organizations listed in this program. Please take time during your participation during the conference to visit the Sponsor tables.

Habitat Selection and Connectivity of Mountain Lions (*Puma concolor*) Across Anthropogenic Barriers on the Olympic Peninsula: A Multi-Method Comparison

Read Barbee (Panthera)

Predicting Florida Panther Movements and Potential Road Crossing Locations within South-Central Florida (2023)

Daniel J. Smith (Center for Landscape Conservation Planning, University of Florida)

Primary Arteries are Obstacles to Mountain Lion Recolonization of Eastern North America, as Predicted by an Individual-Based Model

Mark Elbroch (Panthera), Thomas W. Glass, Richard Beausoleil, Brian N. Kertson, Benjamin T. Maletzke, Quinton Martins, Marc R. Matchett, T. Winston Vickers, Christopher C. Wilmers, Heiko U. Wittmer, Hugh Robinson

The Influence of Anthrophony on Use of Wildlife Crossing Structures Built for Ocelots in Texas

Thomas J. Yamashita (Caesar Kleberg Wildlife Research Institute, Texas A&M University), Ashley M. Tanner, Evan P. Tanner, Daniel G. Scognamiglio, Michael E. Tewes, John H. Young Jr., Jason V. Lombardi

Panel 1: Planning for Pollinators: How Voluntary Conservation Initiatives Can Address the Challenges of Pollinator Listings for Transportation Agencies

Organized by Catherine O'Reilly (University of Illinois Chicago)

Panelists: Cathy Ford (Idaho Transportation Department), Catherine O'Reilly (University of Illinois Chicago), Erica Christiansen (Stantec), Christopher Smith (Minnesota DOT), Katasha Cornwell (Florida DOT)

This panel consists of representatives from the University of Illinois Chicago (UIC), Stantec, Minnesota Department of Transportation (MnDOT), Idaho Transportation Department (ITD), and Florida Department of Transportation (FDOT). The goal of this panel will be to discuss the challenges that pollinator species' listings pose to transportation agencies and how conservation agreements offer flexibility to continue operations while providing a conservation benefit to pollinators. The learning objectives for this panel include: 1) how to best prepare their agencies for potential pollinator species' listings, 2) roadside vegetation best management practices for pollinators, specific to different regions, and 3) how to integrate pollinator conservation initiatives into operations and maintenance activities for transportation agencies. Following the presentations, panelists will address questions from the moderator and audience members.

Factors influencing elk road crossing behavior
Brielle Jaglowski (Cal Poly Humboldt), Micaela Szykman Gunther, Carrington Hilson

Panel 2: Stitching It Together: Integrating Transportation and Land Use Policies to Support Ecological Connectivity at the Landscape Scale

Organized by Neal Sharma (Wildlife Conservation Network)
Panelists: Tiffany Yap (Center for Biological Diversity), Mari Galloway (Wildlands Network), Todd Black (Eagle Mountain City, Utah), Bettina Cameron (Eagle Mountain Nature & Wildlife Alliance), Miles Cottom (Chaffee County, Colorado), Andy Hough (Douglas County, Colorado), Kylie Paul (Center for Large Landscape Conservation)

Transportation systems are situated within a broader array of processes and decisions regarding land use, with land use and transportation decisions affecting each other and the ecosystems in which they exist. We will explore ways people have accounted for ecological/wildlife connectivity in land use policies in order to complement the effectiveness of such considerations regarding linear infrastructure. We will discuss key features of policies intended to support wildlife connectivity at the landscape scale and how those policies are working in practice.

Who We Are

WSP is one of the world’s leading engineering and professional services firms. Our trusted professionals are united by the common purpose— to create positive, long-lasting impacts on the communities we serve through a culture of innovation, integrity, and inclusion.

WHAT WE DO

We develop creative, comprehensive and sustainable engineering solutions for a future in which society can thrive. Equipped with an intimate understanding of local intricacies, world-class talent and proactive leadership, we plan, design, manage and engineer long-lasting and impactful solutions to uniquely complex problems.

Panel 3: Connecting Colorado: How Colorado Used a Statewide Prioritization Process to Implement Wildlife Mitigation Projects

Organized by Melissa Bade (CDR Associates and Colorado Wildlife and Transportation Alliance Facilitator)

Panelists: Pat Basting (Jacobs Engineering), Julia Kintsch (ECO Resolutions), Aran Johnson (Southern Ute Indian Tribe), Tony Cady (Colorado DOT), Chuck Attardo (Colorado DOT)

This session, presented by the Colorado Wildlife and Transportation Alliance (Alliance), will focus on a story line highlighting how the Alliance utilized data collected from the East Slope and Plains and Western Slope Prioritization Studies and created a systematic process for narrowing down the hundreds of identified priority areas to six statewide implementation projects. This focus allows for the Alliance to harness energy and ensure that the most implementable and timely projects are at the forefront of decision-makers minds when seeking funding for design and construction.

In a story of collaboration and political support, bolstered by statewide executive orders, state bipartisan legislative efforts, and federal funding opportunities, this session will highlight two key success stories of US 160 near Durango and I-25 Greenland Overpass south of Denver. As a result of the prioritization studies, the Alliance's priority project identification efforts, and dedication of local staff to apply for grant programs, Colorado's roadways will now be safer for both wildlife and humans. This is a story of how data utilization can lead to real world implementation with the right focus and effort of all parties involved. This session also provides specific insight and information into one field trip option, giving the context of how the Greenland Overpass project came to be on I-25 and how a cohort of partners made the project happen.

TUESDAY, MAY 13 | 3:20PM - 4:50PM (MDT)

Panel 4: Collaborative Strategies for Integrating Ecology into Transportation Projects: Insights From the Duckabush Estuary Restoration

Organized by Grace Amundsen Barnkow (WSDOT)

Panelists: Theresa Mitchell (WDFW), Grace Amundsen Barnkow (WSDOT), Autumn de la Cruz (WSDOT), Mark Steingrebe (WSDOT)

The Colorado Department of Transportation (CDOT) has conducted many studies of wildlife crossing structures to reduce the potential for wildlife vehicle collisions and to facilitate the movement of large and medium-sized mammals (e.g., mule deer, elk, lynx). Until recently, CDOT's wildlife movement research and fencing opportunities have focused exclusively on vertebrate species. Beginning in 2023, CDOT and its partners the Butterfly Pavilion and Animex International have worked together to conduct research and investigate potential mitigation strategies for brown tarantulas (*Aphonopelma hentzi*). Each partner will provide an overview of their perspectives and interest in participating in the study, and lessons learned that could inform other unique collaborative approaches to road ecology research and mitigation strategies. The panel and audience will have an open discussion on any themes that arise from these examples with an aim towards identifying guidance for future projects.

Panel 5: Arach-No-phobia: Perspectives and Results From a Unique, Collaborative Study of Tarantulas in Southeast Colorado (Follows Panel 4)

Organized by Kristin Salamack (Colorado DOT)

Panelists: Kristin Salamack (Colorado DOT), Francisco Garcia Bulle Bueno (Butterfly Pavilion), Steve Mars (Animex International)

The Duckabush Estuary Restoration project exemplifies a multi-agency partnership committed to embedding ecological principles into transportation infrastructure development. It represents a collaborative effort between the Washington Department of Transportation (WSDOT), Washington Department of Fish and Wildlife (WDFW), U.S. Army Corps of Engineers (USACE), and the Hood Canal Salmon Enhancement Group (HCSEG). Our organized session will explore the transferability of our collaboration model to other projects, through a detailed examination of the project's goals, challenges, and outcomes, highlighting valuable lessons learned in interagency collaboration at the intersection of transportation and ecology. This 90-minute symposium will begin with an introduction by the session organizer and feature four fifteen-minute presentations from experts involved in the effort, each addressing distinct yet interconnected aspects of the project. A short (3 minute) question and answer period will follow each presentation with the final 15 minutes dedicated to audience participation and discussion.

TUESDAY, MAY 13 | 3:20PM - 4:50PM (MDT) CONTINUED

Panel 6: Wild Ways: Designing Connectivity Organized by Marta Brocki (ARC Solutions)

Panelists: Nina-Marie Lister (Toronto Metropolitan University), Chris Reed (Harvard University and Stoss Landscape Urbanism), Jeremy Guth (ARC), Beth Pratt (National Wildlife Federation)

This session will feature design-based research proposals that bridge connectivity and civic infrastructure developed through the Wild Ways studio -- a professional design studio developed over three years and delivered in successive iterations to students of architecture, landscape architecture, urban planning and urban design at the Harvard Graduate School of Design. Wild Ways explores themes of peri-urban, rural, regional, and continental connectivity and resilience through the lens of wildlife and landscape infrastructure projects – in this case, throughout California, but also as prototypes for new solutions more broadly. Join Professors Nina-Marie Lister and Chris Reed, co-instructors of the Wild Ways studio, alongside sponsoring organizations ARC Solutions and the Wildlife Crossing Fund for a discussion of next practices and opportunities in design for connectivity, coexistence, and resilience.

Panel 7: The Application of Nature-based Solutions (NBS) for Transportation Systems (Follows Panel 6)

Organized by Lindsay Mobley (Stantec)

Panelists: Ashley Hall (Stantec), Joe Parfitt (VDOT), Jake Riley (Stantec), Mike Dinardo (Stantec)

The panel will explore the implementation of nature-based solutions (NbS) in transportation projects, focusing on enhancing infrastructure resilience while protecting and improving the ecological value of natural resources. Experts will share insights into planning, implementation, and the benefits of NbS for meeting regulatory requirements, along with project examples, lessons learned, and initiatives to mainstream effective approaches at programmatic levels. The audience will participate by sharing their experiences and effective methods for integrating engineering and environmental goals, as well as discussing successful and unsuccessful communication strategies within their institutions and regions. Audience members will engage in a Q&A session (moderated by Lindsay Mobley) at the end of the panel, allowing for questions and discussion on applying presented strategies to their projects.

Workshop: From Policy to Practice: Tackling Barriers to Building Wildlife Crossings

Organized by Erin Sito (Wildlands Network)

Trainers: Logan Christian (National Caucus of Environmental Legislators), Erin Sito (Wildlands Network), Renee Callahan (ARC Solutions)

This workshop, created by Wildlands Network, ARC Solutions, and the National Caucus of Environmental Legislators (NCEL), will engage participants in exploring barriers that impede the completion of wildlife crossing projects. The workshop offers a 90-minute interactive roundtable for both in-person and virtual participants, ensuring broad participation and engagement, fostering collaboration, and inviting insights and experiences to support and inform the community of practice.

Workshop: Communicating Your Transport Ecology Story to the Community, Engineers and Your Mum: Enthralling Your Audience With a Captivating Blog and Stunning Audio-Visuals

Organized by Rodney van der Ree (University of Melbourne and WSP Australia Pty Ltd), Steve Bega (Animex International), Dishane Hewavithana (University of Miami Coral Gables)

Trainers: Dr Rodney van der Ree (University of Melbourne and WSP Australia Pty Ltd), Kieren Topp (Science in Public)

It is predicted that 25-million lane-km of new roads will be built by 2050, and 90% of this will be in non-OECD countries. Many countries and regions lack the expertise, resources and political will to implement ecologically-friendly infrastructure development. An important key step in improving the uptake of ecologically sound advice and designs is ensuring that everyone has a better understanding of the impacts and solutions. Global efforts to communicate and disseminate information must be accessible, relevant to the audience, understandable, usable, and aesthetically appealing. In this training event, we will give practical advice, instruction, hints and tips to enable you to write a blog-style summary or produce a short social-media clip of your research or project for a relevant audience. www.TransportEcology.info is a freely accessible resource for planners, designers, ecologists, engineers, funders, and the community to implement best practice.

Training: Promising Practices for Community Involvement in Transportation Ecology

Organized by Kimberly Andrews, PhD (University of Georgia)

All transportation ecology problems involve the public as stakeholders in some way. Although it is usual to involve stakeholders with institutional or consulting roles in decisions, it is less usual and often seen as more challenging to equitably involve the majority of the public. In 2022, the United States Department of Transportation (USDOT) released its Promising Practices for Meaningful Public Involvement in Transportation Decision-Making guide. This training will cover ways that work to involve the public, youth, disadvantaged and impacted communities, and others in transportation ecology research and decision-making. Participants will discuss meaningful public involvement practices and engage in facilitated activities. This training applies to practitioners working in policy, planning, engineering, operations, civil rights, environmental justice, and public involvement. Practitioners and individuals from tribal nations who provide transportation services in the areas of highway, highway safety, rail, airport, pipeline, port, transit and rail authorities/agencies are encouraged to attend.

Training: FHWA, Planning and Implementing Wildlife Crossings Under IIA

Training FHWA: Introduction to the Stochastic Empirical Loading and Dilution Model

Organized by Gregory Granato (FHWA)

Trainer: Alana Spaetzel (USGS)

The U.S. Geological Survey (USGS) in cooperation with the Federal Highway Administration (FHWA) developed the Stochastic Empirical Loading and Dilution Model (SELDM) to help quantify the risk of adverse effects of runoff on receiving waters, the potential need for mitigation measures, and the potential effectiveness of such mitigation measures for reducing these risks. SELDM is the only approved FHWA stormwater model and can be used for permitting analyses, endangered species issues, calculating pollutant yields with and without stormwater control measures to help develop total maximum daily loads. Documentation, example applications and case studies are available on the SELDM website at: <https://www.usgs.gov/SELDM>. This training will be a hands-on exercise using the latest version of SELDM available to do a hypothetical case-study to become familiar with the model and it's interface.

■ Panel 8: Leveraging Training For a Culture of Conservation in Transportation

Organized by Chris Goodson (Georgia DOT)

Panelists: Chris Goodson (Georgia DOT), Chris Slesar (Vermont Agency of Transportation), Marni Levett (Arcadis)

Successful collaboration between ecologists, engineers, consultants, contractors, and internal teams is essential for achieving environmental compliance and ensuring infrastructure and conservation goals are met. This panel will explore how to effectively communicate job requirements across various disciplines and develop training programs and tools that ensure all stakeholders are aligned and working efficiently together. This session will feature an existing overview of existing training opportunities, a high-level overview of building effective training programs that ensure clarity and understanding across roles, and two case studies showcasing how training programs are designed, implemented, and tailored to meet the needs of different audiences. The session will conclude with a 45-minute moderated panel discussion and interactive Q&A session.

Session 29: (Team)Work Zone Ahead – How Interagency Collaborations are Endeavoring to Improve Our Understanding of How Bats and Bat Habitat are Connected to Transportation Infrastructure (Continued)

Under the Spans: Investigating Bridge Use by Bats in Wyoming

Riley Bernard (Department of Zoology & Physiology, University of Wyoming), Logan Detweiler, Riley Fehr Bernard, Logan William Detweiler, Joshua Franklin Layfield

Understanding Bat Use of CDOT Structures

Jason Roth (Colorado DOT), Anne Hoffman, Grey Buttner, Vanessa Santistevan, Dalton Kidder, Kristin Salamack, Sara BarnasT, Conner Denton, Erik Schmude, Summer Slama, Jeff Peterson

Detection of Listed Bat Species Under Bridges Through the Use of Fecal DNA

Faith M. Walker (Species from Feces Lab, Northern Arizona University), Cory Olson, Susan Dulc, Heather Gates, Cori L. Lausen, Erin Low, Daniel E. Sanchez

Predicting Bat Roosts in Bridges using Bayesian Additive Regression Trees

Amy Wray (Fort Collins Science Center, USGS), Jacob Oram, Helen Davis, Luz de Wit, Winifred Frick, Andrew Hoegh, Kathryn Irvine, Patrick Pollock, Andrea Schuhmann, Frank Tousley, Brian Reichert

Session 33: California Dreamin': Wildlife Crossing Planning

A Novel Population Viability Analysis to Evaluate Road Mitigation Designs

Philip Gould (USGS Western Ecological Research Center), Cheryl Brehme, Merav Vonshak, Robert Fisher

Wildlife Crossing Planning Tool / CROS Plan

Dave Waetjen (Road Ecology Center, UC Davis), Fraser Shilling

Statewide Modeling of Traffic Noise and Illumination of Surrounding Habitat

Ben Hodgson (UC Davis Road Ecology Center), David Waetjen, Fraser Shilling

Session 34: Restoration Can Be Fun-Guys

Exploring Nature Based Solutions for Resilience at Virginia DOT

Anna Salzberg (VDOT), Tessa Artruc (ICF), Maria Mutuc, Chris Berg

Strategies for Valuing and Restoring Ecosystem Services of Roadside Vegetation Following Large-Scale Clearing

Dr. Ellen Oettinger White (State University of New York College of Environmental Science and Forestry), Dr. Marcia S. Meixler

Panel 9: Wildlife Connectivity Projects and Natural Resource Assessments

Organized by Paula Gill (Integral Consulting Inc.)

Panelists: Julie Andersen (Midpeninsula Regional Open Space District), Patrick Huber, Ph.D. (University of California, Davis), Sadie McGarvey (Integral Consulting Inc.), Will Cooper (Integral Consulting Inc.), Lindsay Vivian (Caltrans)

Our aim is to convene a panel to explore the increasingly critical and complex landscape of wildlife connectivity projects, particularly in light of California’s recent Senate Bill 790 (SB 790) and the California Department of Fish and Wildlife’s (CDFW) Wildlife Connectivity Advanced Mitigation Guidelines. These new regulations emphasize the need to prioritize wildlife crossing projects that contribute to species recovery goals, but their implementation requires careful navigation through various regulatory, ecological, and economic considerations. Given the complexity, cost, and oversight involved, it is essential to explore how these projects can be incentivized and streamlined to ensure their successful delivery while maximizing their ecological benefits.

With every community, we redefine what’s possible

Rivers, wetlands, prairies, and forests aren’t just landscapes – they are home to rich natural communities. Our work balances transportation needs with ecological stewardship – restoring habitats, reconnecting wildlife corridors, and building resilience for the landscapes that sustain both natural and human communities.

STANTEC.COM/ENVIRONMENT

Proud Silver Sponsor of ICOET

Our purpose is to create a more connected, sustainable world.

We're setting the standard for fish and wildlife crossings and nature-positive solutions with an interdisciplinary team of ecological connectivity experts. We've successfully delivered hundreds of projects that reconnect fish and wildlife habitat, improve road safety, and prevent wildlife-vehicle collisions.

We're shaping a greener, more sustainable tomorrow.

Jacobs is proud of the work we have done to support the WSDOT Snoqualmie Pass East Project. Photo provided by Washington Department of Transportation.
